Instructional and learning design case study

Environmental Compliance & Land Management

Field trainee blended onboarding, and a reusable course template for a whole internal compliance series.

The challenge

Get new field trainees safe and ready before their first placement

Entry-level conservation and land management trainees need to understand safety protocols, biosecurity and workplace expectations before they set foot on site.

The organisation also needed more than one course. Every onboarding module in the series had to share one consistent, accessible learner experience.

The approach

An end-to-end instructional design process

1. **Need**
   Pre-placement risk: safety, biosecurity, reporting
2. **Learner analysis**
   Entry-level trainees, apprentices and new field staff
3. **Objectives**
   Six measurable outcomes, from explain to apply
4. **Design**
   Bite-sized chunks paired with authentic scenarios
5. **Development**
   Modular lessons on a reusable course template
6. **Evaluation**
   Formative checks, AI feedback and reflection

Process workflow

Learn by doing, not scrolling

Each responsibility is a step learners move through. The pull-out menu tracks progress and locks lessons until the activities are done.

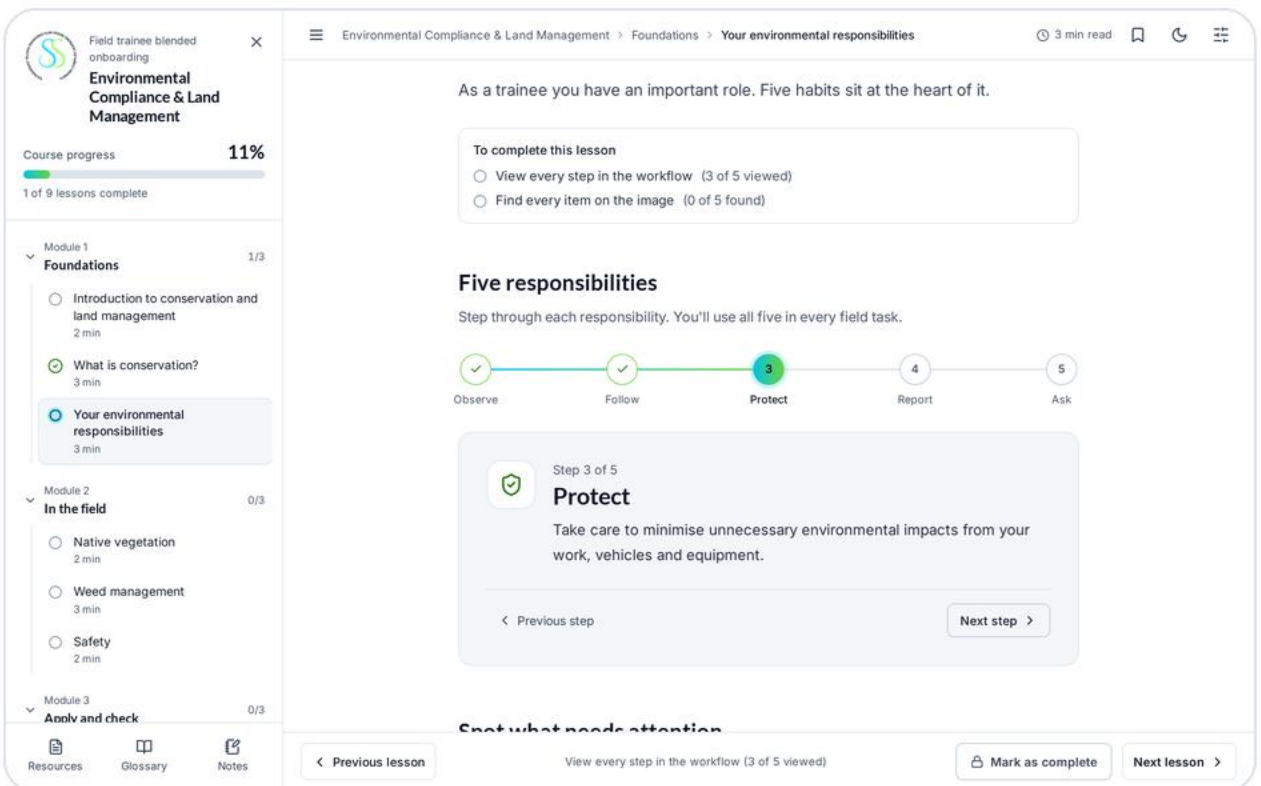

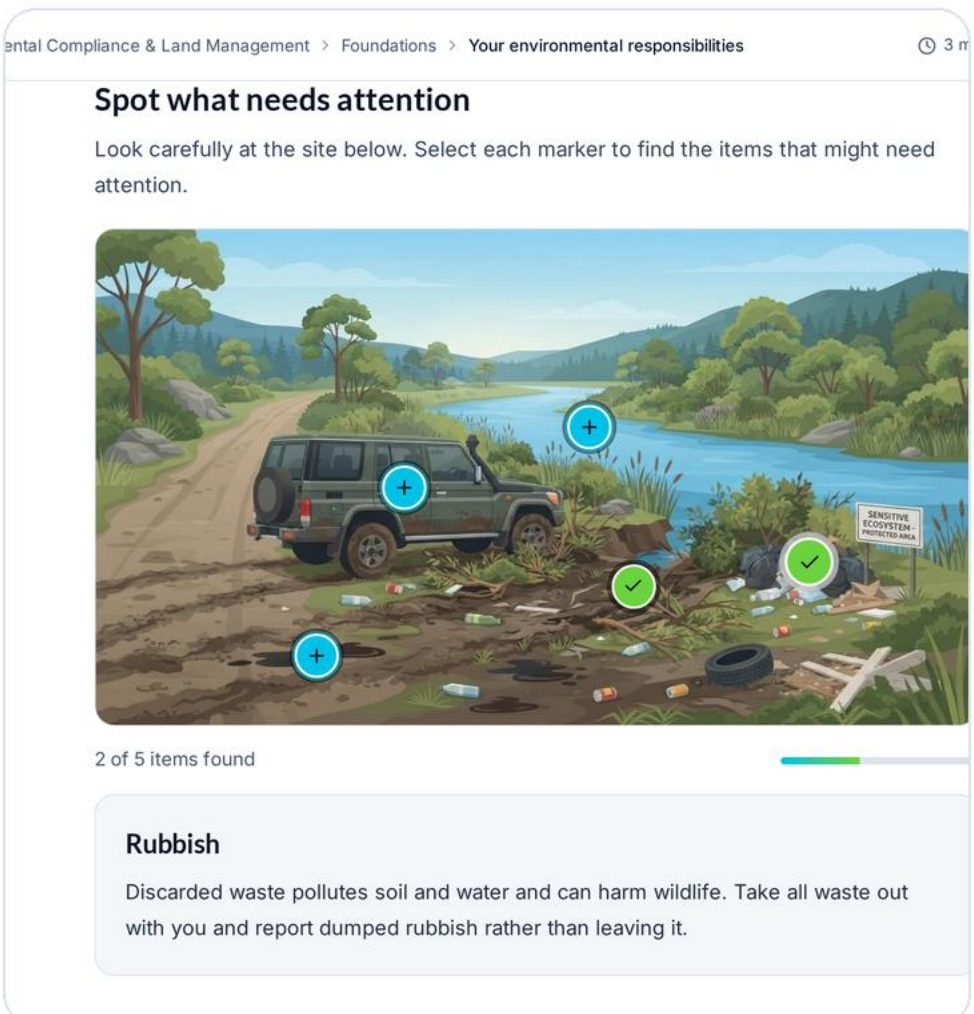

Image hotspot

Spot what needs attention

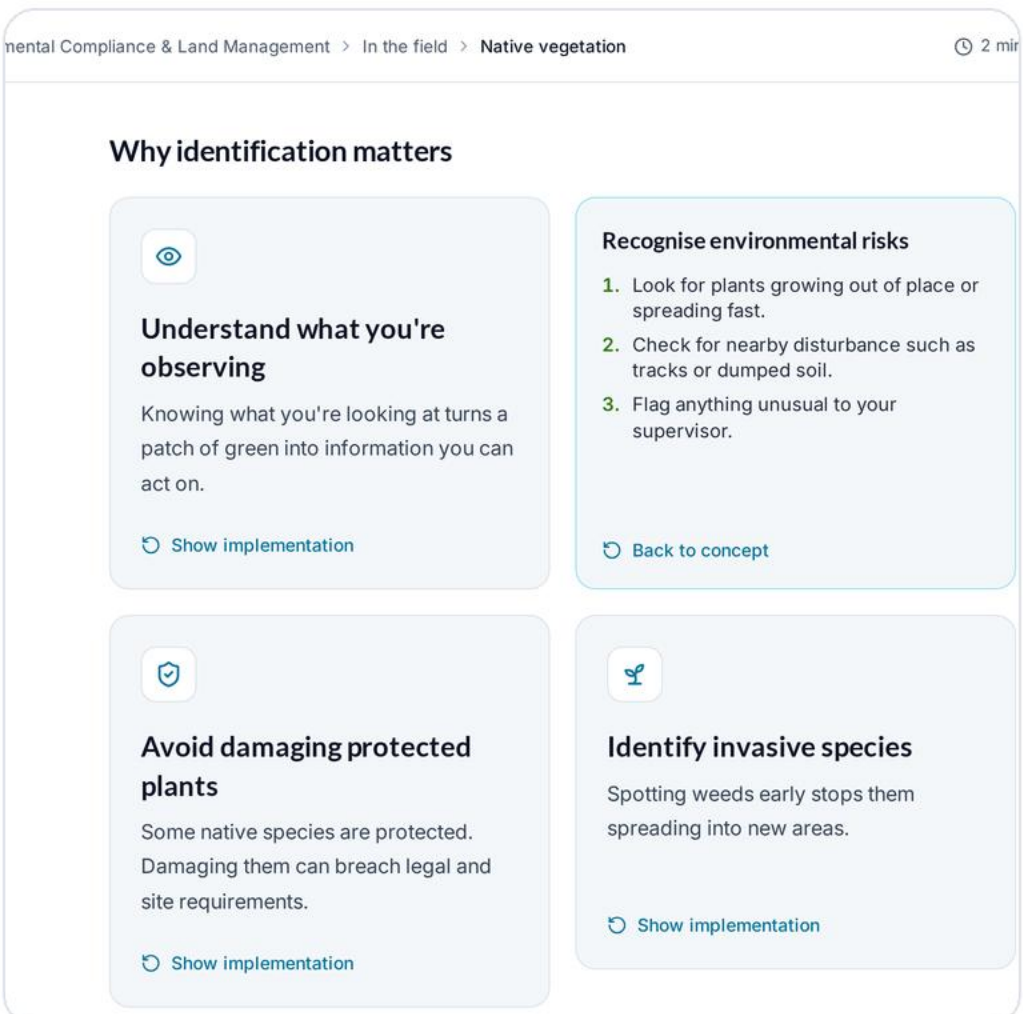

Learners explore a real site scene and find the damaged vegetation, rubbish, vehicle, waterway and fuel risks.

Flip cards

From concept to field practice

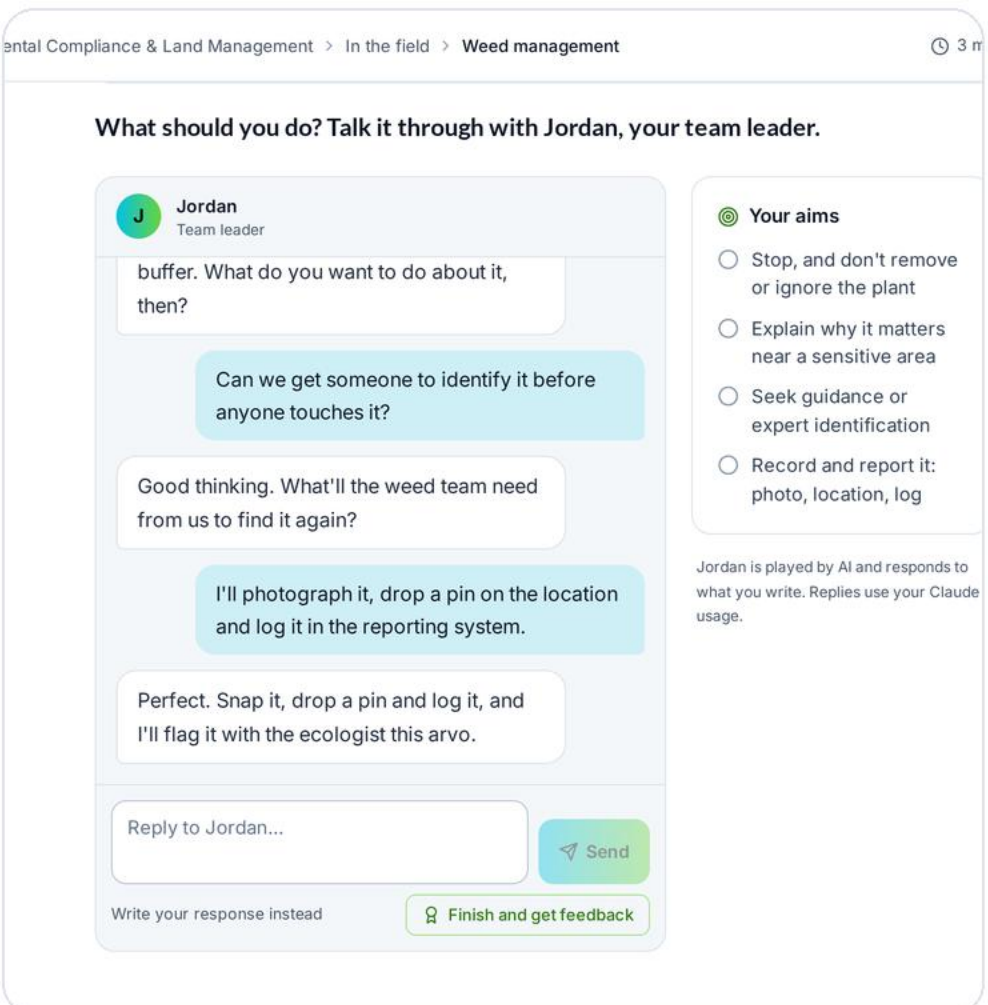

Each card turns a key idea into practical steps trainees can take on site.

AI workplace scenario

Talk it through with an AI team leader

Instead of picking from fixed options, trainees explain what they would do about an unfamiliar plant, and the AI character responds in real time.

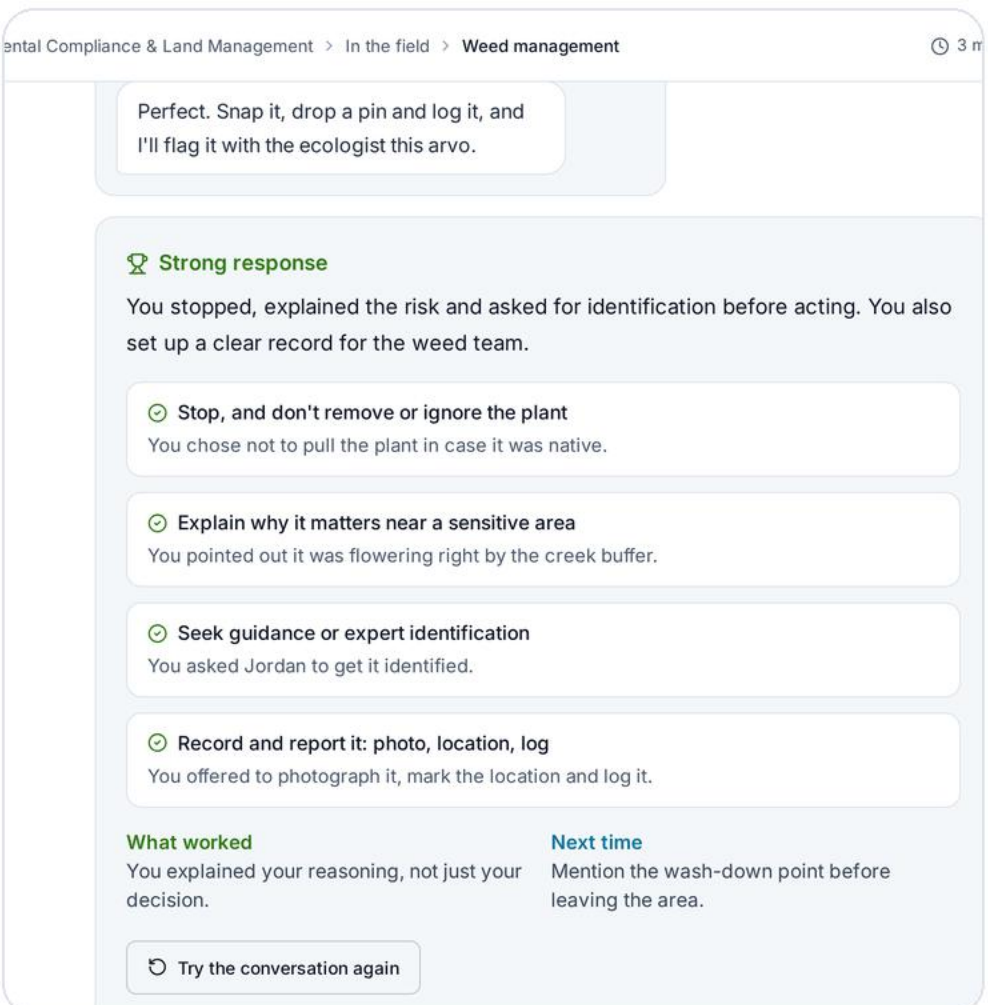

Sample conversation shown for illustration.

Contextual feedback

Feedback against every aim

The debrief checks the trainee's own words against the lesson's four aims, then suggests what to do next time.

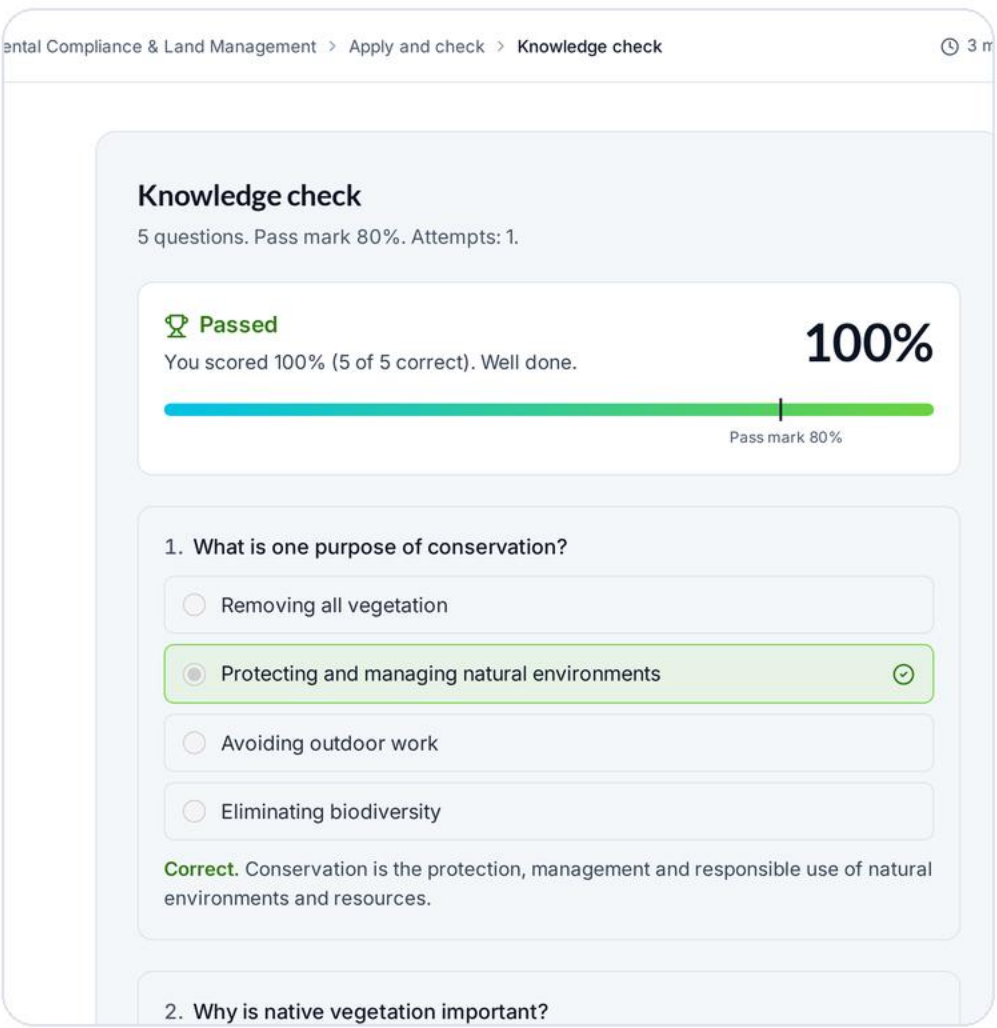

Sample feedback shown for illustration.

Knowledge check

Check understanding before the field

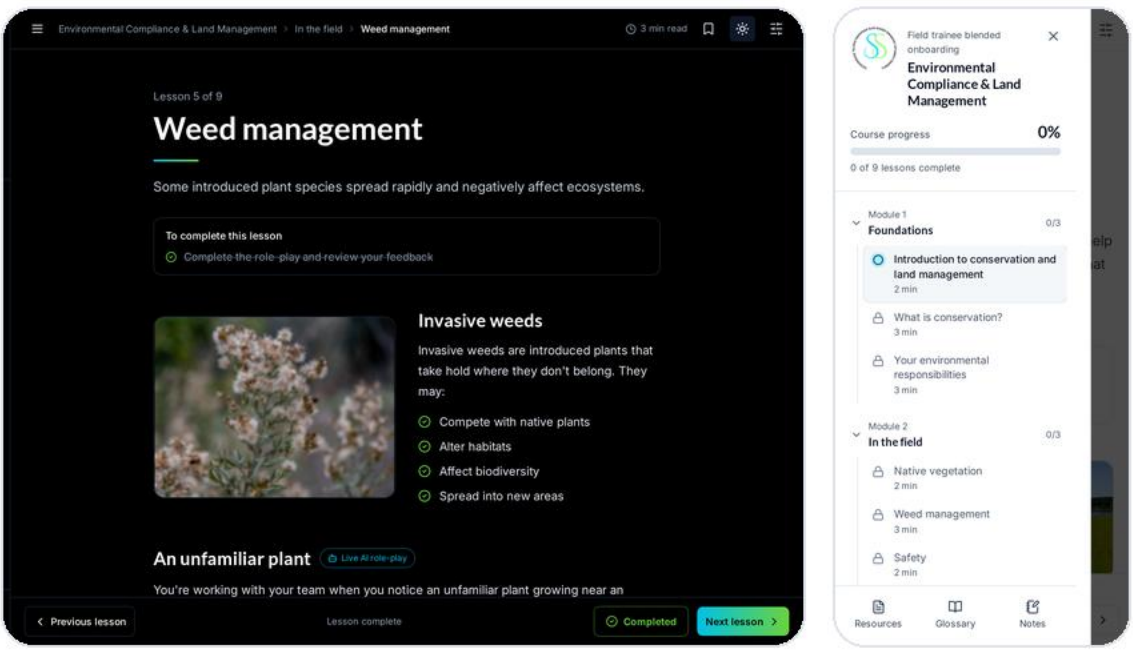

A five-question quiz with an 80% pass mark and an explanation for every answer.

Inclusive by design

Built for every learner and every screen

Light and dark themes, keyboard and screen-reader support, and a layout designed for WCAG 2.1 AA on desktop and mobile.

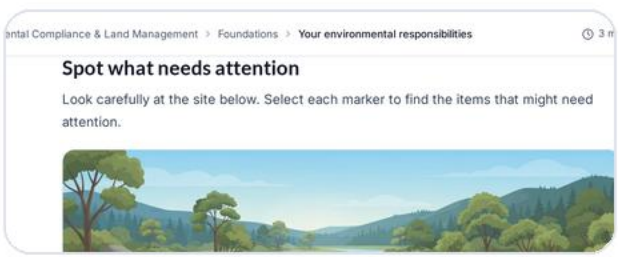

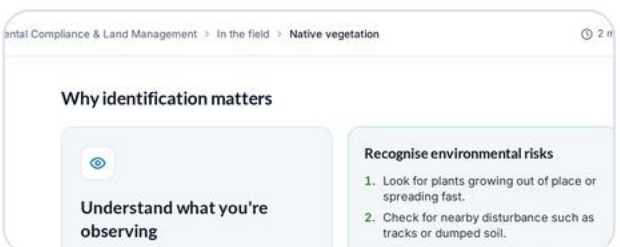

The result

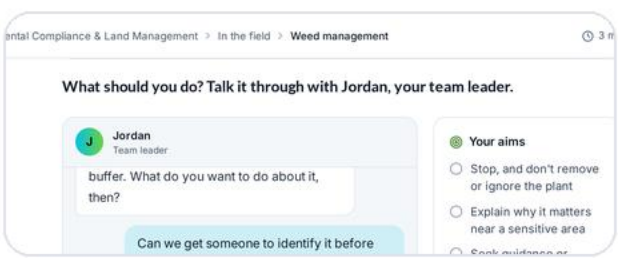

One template, a whole compliance series

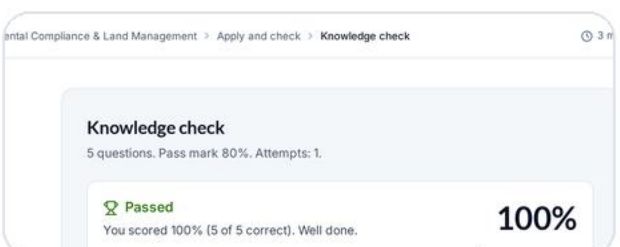

18 reusable content blocks: text, media, hotspots, flip cards, checklists, quizzes, reflection and live AI role-play.

Each new onboarding course swaps the content and keeps the same consistent, accessible experience.

Designing onboarding or compliance learning? Let's talk.
